

1. From www.scratsnutemporium.com
 - a. Where is Scrat's Nut Emporium physically located?
North West Side of Durham

- b. What's the most expensive item that is sold?

- c. What's the phone number for the shop?

- d. What's the URL for the My Account page?
https://www.scratsnutemporium.com/?page_id=54

2. When Manny entered his credentials at the cloned My Account page,
 - a. What happened?
The SET copied the account login page except it can't actually login a user. When the credentials were sent, the user was redirected back to the actual login page except SET recorded the credentials.
 - b. Where was he redirected?
https://www.scratsnutemporium.com/?page_id=54, ie the actual login page.
 - c. Why is this important?
The pages look the exact same, so it essentially looks like the page refused the login and reset.
 - d. What would a user think?
A user is likely to assume they messed up their password the first time, so they will just reenter it. Then, the next time they then login like normal.
3. Screenshot of logging the username and password for Manny on the Kali box.

```
